

POWER PACKED FOR VAN LIFE!

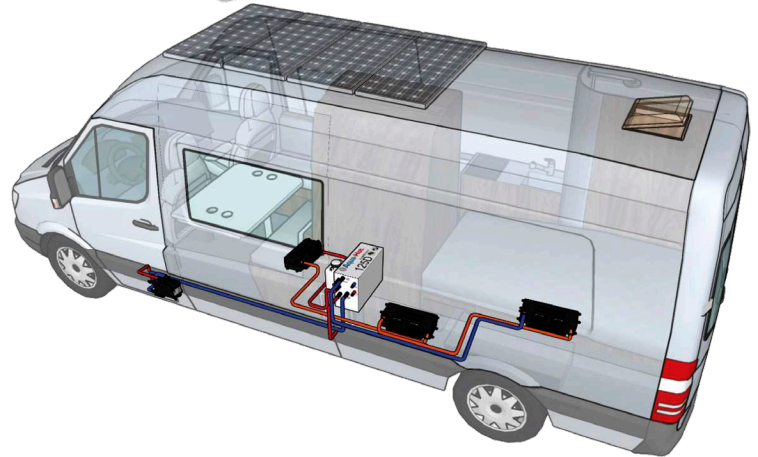

Heat and hot water anywhere the road takes you—quietly, efficiently, relentlessly.

Compact, efficient, and engineered for adventure—the Aqua-Hot 125 Series Diesel & Gasoline systems deliver reliable heat and continuous hot water in a single self-contained unit. Designed for Class B campervans, it keeps owners comfortable whether parked by the coast, cruising through cities, or climbing mountain passes. This is the one system that doesn't compromise—because neither do van owners.

125-SERIES HYDRONIC SYSTEMS

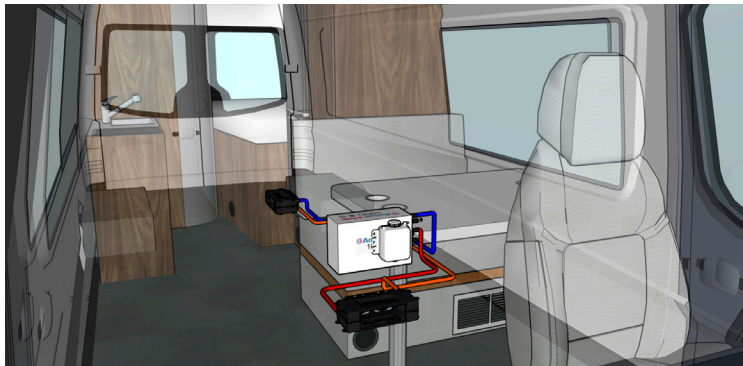

- **Adventure-Ready Performance** - Operates flawlessly up to 16,000 ft. with automatic fuel-to-oxygen adjustment—no extra kits needed.
- **One Unit, Two Comforts** - Provides both heat and continuous hot water at 110–120°F for true home-like convenience.
- **Fuel-Smart Design** - Runs directly off the van's diesel or gasoline supply—no extra fuel tanks required.
- **Targeted Comfort Zones** - Compact heat exchangers can be placed throughout the van for even heating, up to 3 independent zones.
- **Continuous Hot Water** - 0.8 GPM at a consistent temperature—perfect for showers, dishes, and daily use.
- **Quiet by Design** - Exterior-mounted combustion unit with muffler plus low-decibel interior fans.
- **Night Mode** - Reduced noise operation without sacrificing warmth.
- **Dual Power Flexibility** - Operates on vehicle fuel or 120V shore power for reliable heat and hot water wherever you're camped.
- **Smart LCD Controller** - Control three zones independently with an easy-to-use interface, plus built-in test and diagnostic functions.
- **Compact All-in-One System** - At just 11.5”H x 7.5”W x 17.66”D, saves space without sacrificing capability.
- **Nationwide Service Support** - Backed by over 300 service centers across North America for confidence wherever you roam.

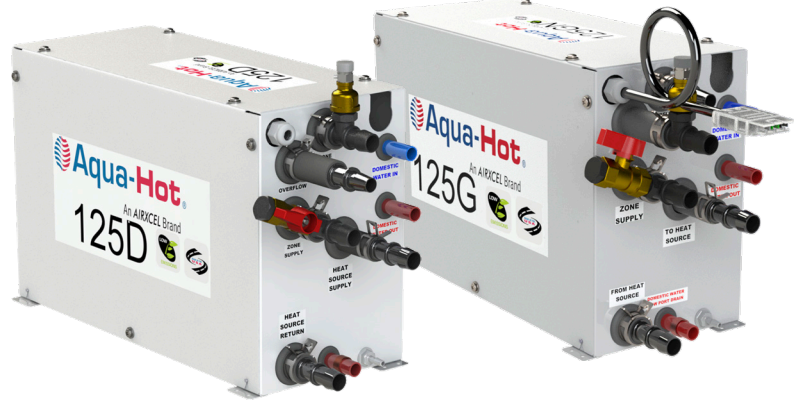

For over 40 years, Aqua-Hot has been redefining RV comfort. The 125 Series builds on that legacy with a compact hydronic system purpose-built for Class B campervans. By tying directly into the vehicle's fuel system, it delivers heat and hot water without extra fuel requirements.

Whether camping off-grid or plugged into shore power, the Aqua-Hot 125 Series ensures consistent comfort—quiet, efficient, and always adventure-ready.

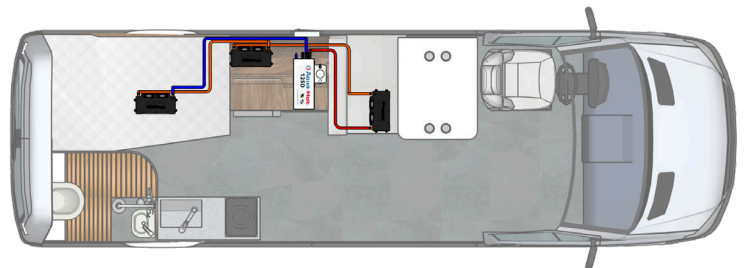

The single, self-contained (11.5"H x 7.5"W x 17.66"D) unit delivers highly efficient heating and hot water, resulting in significant space and cost savings.

Compact Cozy Heat Exchangers (13.125" x 3.625" x 6.5") can be strategically placed to deliver heat to up to 3 different zones throughout the van. The exchangers can be installed either vertically or horizontally to easily integrate with interior configurations.

The LCD Screen Controller allows independent settings for up to 3 heating zones. Operation, Testing, and Diagnostic features give the user total control of their climate system.
