The way you build for adventure should not limit the way you heat for it. The Aqua-Hot 175 Modular brings rugged hydronic comfort to custom van and RV layouts with a flexible modular design that installs where space works best. Engineered with an Espar burner, high-quality military-grade brass fittings, and off-grid-ready performance, it delivers continuous hot water, quiet interior heat, and the confidence to travel farther, stay longer, and camp deeper into the unknown. This direction is supported by the 175 Series emphasis on rugged overland durability, continuous hot water, Espar burner integration, and modular availability.

175 MODULAR SERIES HYDRONIC SYSTEMS

- **Modular Installation Freedom** - Fits into cabinetry, benches, storage, and other space-smart locations.
- **Built for Rugged Travel** - Engineered for off-road demands and built for the long haul.
- **High-Altitude Ready** - Manual High-Altitude operation engagement through Eberspacher Easy Start PRO controller.
- **Fuel-Smart Off-Grid Operation** - Runs directly from the vehicle's fuel supply. No extra tanks needed.
- **Targeted Heat Zones** - Compact, quiet heat exchangers deliver warmth where it matters most.
- **More Hot Water, More Capability** - Continuous 40°F hot water temperature delta at up to 1.0 GPM.
- **Ultra-Quiet Comfort** - Exterior-mounted combustion and low-decibel interior fans keep things quieter.
- **Night Mode Stealth Heating** - Reduced fan speed for quieter overnight comfort.
- **Dual Power Flexibility** - Operates on vehicle fuel or 120V shore power.
- **Mission-Ready LCD Control** - Control up to three zones with built-in test and diagnostics.
- **Nationwide Service Support** - Backed by over 300 service centers across North America for confidence wherever you roam.

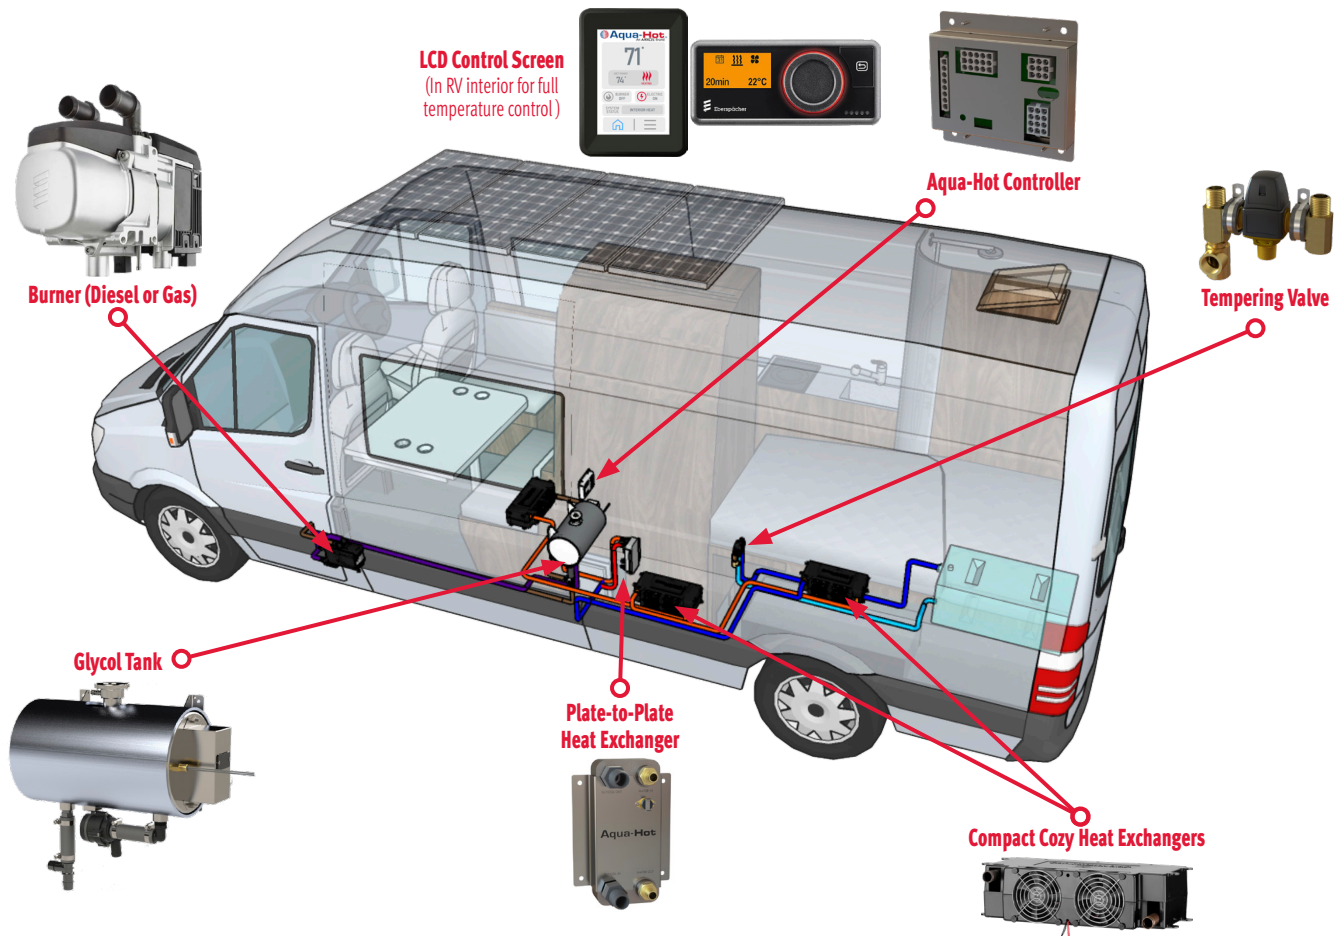

Flex Your Comfort!

 **Aqua-Hot**[®]
An AIRXCEL Brand

**Build the comfort system around your floorplan,
not the other way around.***

*Complete installation may require additional hoses, clamps, and heat exchangers depending on floorplan and application.

The Aqua-Hot 175 Modular gives OEMs, upfitters, and custom builders a more rugged way to bring hydronic heating and on-demand hot water into space-conscious van and RV platforms. By separating key system components, the 175M makes it easier to design around real interior layouts while still delivering the upgraded performance of the 175 Series. With quiet zone heating, continuous hot water up to 1.0 GPM, fuel-smart operation, and a controller that manages up to three zones independently, it is built for adventurous travelers who expect more from every mile.
